

**ALFA Tube 2HQP**  
**2.4 GHz Long Distance Outdoor**  
**Wi-Fi PoE AP/CPE IP68**

# **Client Mode - Quick Guide**

## Tube-2HQP Configuration Hardware Setup

- Using a PoE compatible ethernet cables connect the Tube-2HQP to the P+D/OUT port and a Computer to the Data IN port on the on the PoE Adapter.
- Connect the ALFA 802.3af/at Gigabit PoE Adapter to a power source.
- On the computer that is connected to the PoE adapter, open a browser and type 192.168.1.1 into the address bar.

### Wireless Overview

radio0 **Qualcomm Atheros QCA9530 802.11bgn** Device is not active Restart Scan Add

disabled **SSID: Tube-2HQ | Mode: Master** Wireless is disabled Enable Edit Remove

### Associated Stations

Network	MAC address	Host	Signal / Noise	RX Rate / TX Rate
No information available				

Save & Apply Save Reset

Click Scan.

### Join Network: Wireless Scan

Signal	SSID	Channel	Mode	BSSID	Encryption	
-22 dBm	hidden	9	Master	DE:EC:5E:55:09:E1	WPA2 PSK (CCMP)	Join Network
-35 dBm	WiFi-Arris	11	Master	F8:A0:97:02:1C:76	WPA2 PSK (CCMP)	Join Network

- Search for desired network.
- Note the Channel, BSSID, Encryption for later.
- Click Join Network.

### Joining Network: "WiFi-Arris"

Replace wireless configuration

Check this option to delete the existing networks from this radio.

Name of the new network:

The allowed characters are: A-Z, a-z, 0-9 and \_

WPA passphrase:   
Expecting: non-empty value key here.

Lock to BSSID

Instead of joining any network with a matching SSID, only connect to the BSSID `FE:A0:97:02:1C:76`.

Create / Assign firewall-zone:

Choose the firewall zone you want to assign to this interface. Select *unspecified* to remove the interface from the associated zone or fill out the *custom field* to define a new zone and attach the interface to it.

- Enter the WPA passphrase for the selected network.
- Click Submit.

### Wireless Network: Client "WiFi-Arris" (radio0.network2)

#### Device Configuration

Status: Mode: Client | SSID: WiFi-Arris  
-dBm Wireless is not associated

Wireless network is enabled:

Operating frequency: Mode:  Channel:  Width:

Allow legacy 802.11b rates:

Legacy or badly behaving devices may require legacy 802.11b rates to interoperate. Airtime efficiency may be significantly reduced where these are used. It is recommended to not allow 802.11b rates where possible.

Maximum transmit power:  - Current power: *unknown*

Specifies the maximum transmit power the wireless radio may use. Depending on regulatory requirements and wireless usage, the actual transmit power may be reduced by the driver.

- In the Device Configuration section under the General Setup Tab change the Operating frequency - Channel to auto.
- (Selecting the previously noted Channel will only work if the source signal is not configured for dynamic channel switching.)

Wireless Network: Client "WiFi-Arris" (radio0.network2)

Device Configuration

The screenshot shows the 'Device Configuration' page for a wireless network client. The 'Advanced Settings' tab is selected, indicated by a red arrow. Below the tabs, the 'Country Code' dropdown menu is set to 'US - United States', also indicated by a red arrow. Other settings include 'Coverage cell density' (Disabled), 'Distance Optimization' (auto), 'Fragmentation Threshold' (off), 'RTS/CTS Threshold' (off), 'Force 40MHz mode' (unchecked), and 'Beacon Interval' (100).

- In the Device Configuration section select the Advanced Settings Tab.
- Change the Country Code to the US - United States or the Country in which you are operating from.

Interface Configuration

The screenshot shows the 'Interface Configuration' page. The 'General Setup' tab is selected, indicated by a red arrow. The 'Mode' dropdown menu is set to 'Client', also indicated by a red arrow. The 'BSSID' field is empty, indicated by a red arrow. The 'ESSID' field contains 'WiFi-Arris' and the 'Network' dropdown is set to 'wwan'. A 'Dismiss' button and a green 'Save' button are visible at the bottom right.

- In the Interface Configuration section select the General Setup Tab.
- Confirm the Mode is set to Client.
- (Optional) Enter previously noted BSSID.

## Interface Configuration

General Setup **Wireless Security** Advanced Settings

Encryption WPA2-PSK (strong security)

Cipher auto

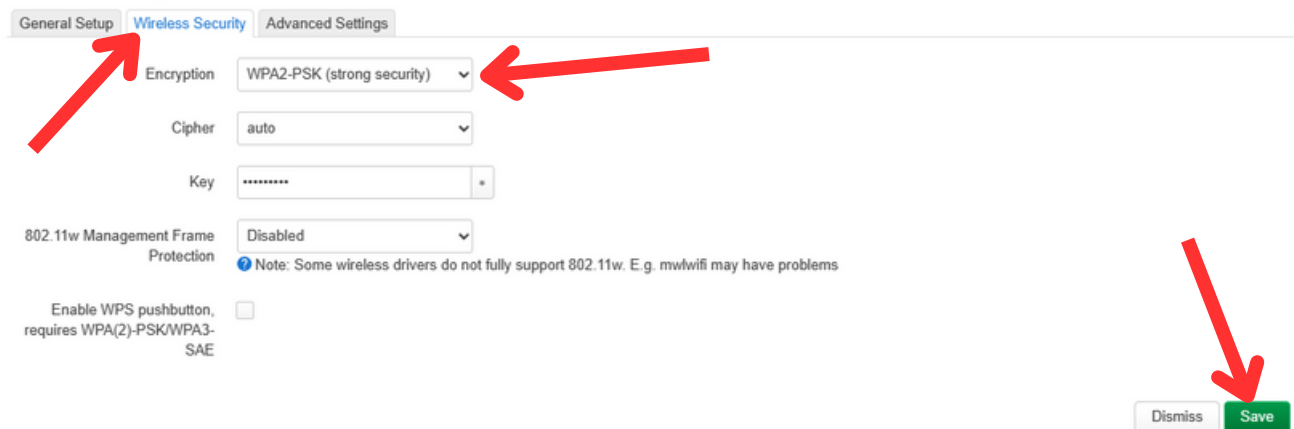

Key .....

802.11w Management Frame Protection Disabled

Note: Some wireless drivers do not fully support 802.11w. E.g. mwlwifi may have problems

Enable WPS pushbutton, requires WPA(2)-PSK/WPA3-SAE

Dismiss Save

- In the Interface Configuration section select the Wireless Security Tab.
- Confirm the Encryption matches the previously noted Encryption type.
- Click Save.
